

## Boost your AeroPod/PowerPod performance to “11” with FW11!

### Introducing firmware FW11:

- 1) Get FW11 from our Velocomp Aero (VA) app for Mac/PC. Connect your unit to VA by USB (one last time) to install FW11. DO IT!!!
- 2) FW11 brings a BIG improvement in battery life...a fully charged PowerPod or AeroPod will last 150 to 500 days while asleep (depends on model)—five to ten times longer than previously.
- 3) “Look, ma, no USB Cable”: FW11 connects your PowerPod/AeroPod WIRELESSLY to VA and our Velocomp Wireless (VW) app for iOS and Android.
- 4) AeroPod Wireless and PowerPod Wireless models have full wireless features on VA and VW including ride file downloads, firmware uploads, profile modifications, and more
- 5) Older AeroPod and PowerPod units have all wireless features except ride downloads, firmware updates, and aero dashboard (AeroPod Wireless units only). NOTE: YOU CAN TRADE YOUR OLDER AP/PP FOR AEROPOD WIRELESS OR POWERPOD WIRELESS.

<https://velocomp.com/collections/trade-up-programs>

- 6) FW11 works with our Velocomp Wireless app (VW) giving you complete Velocomp Aero software performance *from your smartphone and bike*. Any AP/PP can manage and switch profiles, and AP/PP Wireless units can also download ride files, view and analyze them, email them to your computer, from *wherever you are!*
